

ALGEBRA SEMINAR

Primitive deformations of quantum p -groups , Part 2

Xingting Wang
Temple University

ABSTRACT: In this series of two talks, I will discuss the classification of finite-dimensional Hopf algebras in positive characteristics. A technique called primitive deformation will be introduced in order to study the isomorphism classes of these Hopf algebras. As an application, connected Hopf algebras of dimension p^i with $i \leq 3$ are now completely classified. Further questions concerning the cohomology theory and gauge equivalence for many newly discovered Hopf algebras in positive characteristics will also be discussed. This is a joint work with Linhong Wang and Van Nguyen.
